incursions/excursions

HOURS

100

Board endorsed

For investigators who want to learn the skills of solving crime.

This course provides you with the opportunity to learn about the role of forensic scientists and participate in hands-on forensic science investigation activities. You will explore the forensic science techniques of ballistics, fingerprinting, blood splatters, DNA, fibre analysis, trace evidence, ballistic poisons and toxins, imprints, facial reconstruction, arson and forgery, as well as examine real life crime investigation case studies.

There will be an opportunity to apply the skills you learn throughout the course in a crime scene investigation display which might include creative diorama, dramatised recreation, photography and digital presentation.
