# MUSIC PRODUCTION

## FACULTY
CAPA

## CHARGE
$20

Equipment and maintenence

## HOURS
100

School developed

Music Software and Production gives students the opportunity to develop their skills and understanding in music recording, arranging and composition. You will learn how to produce live recordings and live mixing using a range of available software and hardware.

You will also regularly access our fully equipped music studio to record and create music that you learn in the classroom.

Class and individual projects in this course will include arranging cover songs, developing performances, and showcasing your music and production skills for authentic audiences at campus and College events.

You will also have the opportunity to complete and present a personal interest project linked to your chosen instrument/s or an aspect of Music Production you are passionate about (examples include learning a new instrument, composing and producing your own album, preparing a set list for your first gig, and creating a podcast).
